Profile

Computer Science Engineering student with skills in Generative AI, software development, IoT, and Blockchain. Experienced in building AI-driven and full-stack applications using Python, Streamlit, Flutter, Flask, and Supabase. Hands-on experience with prompt engineering, NLP, and deploying interactive applications. Proven track record through academic projects and internships. Team-oriented, technically strong, and eager to contribute to innovative solutions.

Technical Skills

Languages: C++, Python, C, Java, SQL, HTML/CSS, Kotlin

Frameworks: Flutter, Flask, Android Development, Pandas, Matplotlib, Streamlit, google-maps-api

Tools: Manual Testing, Bug Reporting, TensorFlow/Keras, Git, Android studio, Hugging face

Databases: Neo4j (Graph DB), Supabase, SQL, Firebase

AI/ML: NLP, Prompt Engineering, Generative AI

Projects

Paryavaran Kavalu – Smart Waste Management Platform | *React, Kotlin, Firebase, Google Maps API* | 2026

- Built a real-time environmental monitoring platform with interactive mapping and waste-report tracking features.
- Implemented Firebase-based authentication, live data synchronization, and gamified user engagement systems.

AI Content Generator | *Python, Streamlit, Hugging Face* | 2026

- Built a Generative AI application capable of producing real-time content using Hugging Face transformer models.
- Applied prompt engineering and NLP techniques to enhance output quality and contextual understanding.

Resume Analyzer | *Python, Streamlit, NLP* | 2026

- Built an AI-powered resume screening application that analyzes resumes against job descriptions and calculates compatibility scores.
- Developed an interactive Streamlit interface with automated resume parsing and keyword-based matching functionality.

FaithConnect | *Flutter, Supabase* | 2025

- Developed a community-driven mobile application for religious engagement and networking.
- Integrated Supabase for real-time database, authentication, and secure backend.

IoT-Based Precision Farming System | *IoT* | 2025

- Built a real-time farm monitoring system using soil moisture, temperature, and humidity sensors.
- Automated irrigation and sent real-time data to a cloud dashboard via Wi-Fi.

Face Emotion Recognition System | *Deep Learning* | 2025

- Developed a CNN-based real-time face emotion recognition system.
- Used OpenCV and TensorFlow/Keras for preprocessing and model training.

Experience and internships

Android App Development Intern (Gen AI) MindMatrix — Bangalore Feb 2026 – May 2026

- Developed Android application features integrating Generative AI functionalities.
- Worked on prompt engineering, API integration, and mobile app workflows.

Software Tester Intern Bookleey Ecommerce Pvt Ltd — Bangalore Feb 2025 – May 2025

- Performed manual testing, bug reporting, and QA validation for e-commerce applications.
- Collaborated with developers to identify and resolve bugs while following SDLC and QA processes.

Education

Vemana Institute of Technology, Bachelor of Engineering in Computer Science 2022 - 2026

- CGPA: 8.7/10.0
- **Coursework:** Computer Networks, Blockchain Technology, Cloud Computing, Machine Learning
